

# Central Kitsap High School & Middle School Replacement Project

Central Kitsap School District

Revised Traffic Impact Study

February 2017

Prepared by

## Central Kitsap High School & Middle School Replacement

The Central Kitsap School District will replace several aged buildings at the Central Kitsap High School (CKHS) and Central Kitsap Middle School (CKMS) sites, and form a centralized, shared and integrated campus to better serve students, faculty, and the community. The construction and development will occur in multiple phases, to accommodate students and maintain educational services during construction of the project.

The schools are currently located at 3700 NW Anderson Hill Rd and 10130 Frontier PI NW in the Silverdale Urban Growth Area of Kitsap County. Currently, CKHS is located in the southern portion of the property with access via NW Anderson Hill Road and NW Bucklin Hill Road, and CKMS is located to the north with access via Frontier Place NW. The schools will be reconstructed and co-located into a new, facility of approximately 312,000 sf in the center of the campus with a shared-use gymnasium building of approximately 19,000 sf retained at the existing CKMS site. Additional support facilities (i.e. parking and sports fields) for CKHS will be located to the north and west and for CKMS to the south.

In order to enlarge the campus space, the district purchased two parcels on the east side of the campus, located at 3890 and 3898 NW Windy Ridge Rd and two parcels on the northwest corner of the campus. Existing residences on the parcels will be demolished. Including new acquisitions, the project covers an area of approximately 59 Acres.

Also located onsite and to be relocated offsite are the following facilities: the District's transportation/bus barn facility, centralized kitchen, New Frontiers building, alternative high school and daycare portable (all accessed via Frontier Place NW), and the science kit building (accessed via NW Anderson Hill Rd). These buildings will be demolished as part of the project.

Currently for the 2016-2017 school year, CKHS enrolls 1,490 students (1,360 full-time equivalent FTE students) and CKMS enrolls 719 students, and there are 233 students attending the alternative high school for a total enrollment of 2,442 students on the site. The new facility is being designed for an opening day capacity of 1,400 high school and 700 middle school students, for a total of 2,100 students. This traffic study is based on a more conservative student population of 1,500 high school students and 800 middle school students (2,300 students total).

At build-out in 2020 onsite programming facilities for CKHS will include a new football/soccer field; field lighting and seating for up to 1,500 spectators; one baseball field, one softball field, and one soccer field; and up to eight tennis courts, as well as associated features such as scoreboards and flag poles. The football/soccer field (and potentially one or more of the other fields to be determined in the future) will be synthetic turf with field lights. Additionally, construction of a new concession stand and restroom facility is being considered.

Programming facilities for CKMS will include one multi-purpose athletic field and track that may also be synthetic turf with field lights. CKHS and CKMS will each have a gymnasium within the new main building and will share an auditorium. The existing CKMS gymnasium will remain and be used as a CKHS auxiliary gymnasium to support PE and athletic events as well as potential community use. In the future (timing unknown), the District also intends to construct a ball field with associated parking at the site of the existing CKHS at the south end of the campus. The future ball field will be accessed via NW Bucklin Hill Rd and NW Anderson Hill Rd.

The access roads for student/visitor vehicular traffic and for District buses are designed as separate circulation systems and provide more onsite queuing area during drop-off and pick-up times. Primary vehicular access for CKHS will be via Frontier Place NW near the current CKMS driveway location, and access for CKMS will be provided via NW Anderson Hill Rd at a new driveway, located approximately 450 feet south of the roundabout. The project will construct a left-turn pocket on NW Anderson Hill Road to facilitate left turns entering the school with space for up to 10 cars. The driveway, at approximately 450-foot spacing from the roundabout (equivalent to space for 18 cars), is located beyond the expected average queue/backup approaching the roundabout from the south. A separate driveway will be provided on Frontier Place NW for District bus access and delivery vehicles only during normal operations. Vehicle loops for parents and visitors will be separated for each school; the CKHS loop to the north and the CKMS loop to the south. The CKMS driveway is designed to better manage the on-site queues drop off activity plus provide separate left-turn and right-turn lanes for leaving the site.

The campus will also feature an extensive system of pedestrian paths and amenities for internal circulation. Additional pedestrian connections and linkages may also connect the campus to adjacent community resources, depending on site conditions. In accordance with requirements identified at the pre-application meeting, the landscape plan includes a unified pedestrian circulation plan.

The project includes construction of several frontage improvements to NW Anderson Hill Rd, including a 5-foot wide bike lane, 5-foot wide sidewalks, curbs, and gutters. A southbound, left-turn, pocket lane will be added on NW Anderson Hill Rd to facilitate access to the CKMS driveway. A new 5-foot wide sidewalk will also be constructed along the frontage of Frontier PI NW.

The schools currently have a combined total of 460 parking spaces. The proposed project will provide 472 parking spaces distributed throughout the reconfigured campus, plus an additional 29 spaces for use during special events within the bus loop. When the new schools open, an additional 86 spaces will also be available on the existing CKHS site to the south for an interim parking total of 587 spaces. After the existing CKHS site is redeveloped with the ball field, 92 permanent parking spaces will replace the existing 86 spaces at that location, for a total of 593 total parking spaces at project completion.

The 2015 International Building Code (IBC) requires that 2 percent of the total parking be accessible parking. Twenty-five accessible spaces are provided, exceeding this requirement.

An internal connector roadway will provide fire access adjacent to the building and provide connection between High School parking and Middle School visitor parking. Multiple access points for the large parking lot are provided to minimize onsite congestion.

Construction will occur in seven phases to accommodate ongoing educational use of the facilities. The first phase will begin construction in Summer 2017 and the final phase is expected to conclude construction in 2020. The timing of the demolition of the high school and construction of the accessory ball field at the south end of the site is undetermined at this time.

### **Traffic Analysis for the Project**

This report documents the expected changes to site traffic and operations for both the morning and afternoon peak hours associated with the high school and middle school. The Traffic Report has been revised to reflect new site traffic information and also to reflect changes in site access and site circulation.

Kitsap County Public Works Traffic Division has identified a focused scope of the study for SEPA review and permitting for the schools replacement project. The combined high school and middle school campus will result in a balance in the daily traffic generated by the School District functions on Frontier Place and through the roundabout intersection. The focus of the study is on the expected traffic operation of the site driveways to NW Anderson Hill Road and to Frontier Place NW and on the operation of the NW Anderson Hill Road at Frontier Place NW roundabout intersection. Additional site traffic information was collected in January 2017 to document existing parent drop off and pick up activity at the CK Middle School. The revised traffic analysis continues the focus on the expected morning and afternoon school peak operation with the two schools starting within a single hour, reporting the expected operation at site driveways and through the roundabout.

## Background Transportation Conditions

Central Kitsap High School (CKHS) and Middle School (CKMS) are located within close proximity in the Silverdale area of Kitsap County, and locations are shown in this screen shot from Google maps. NW Anderson Hill Road and NW Bucklin Hill Road are the two arterial roadways adjacent to the CKHS with Frontier Place NW providing direct access to CKMS. This summary of background conditions includes a review of the roadway characteristics, the current traffic volumes on the street network and an overview of the existing traffic operations in the project vicinity.

### Street Network

NW Anderson Hill Road is a two-lane minor arterial roadway with posted 25 MPH speed limit between NW Bucklin Hill Road and Provost Road NW. The high school has multiple driveway access points to NW Anderson Hill Road providing connections from the main high school parking lot with bus loading plus visitor parking (exit only) and connections to staff parking lot, parent drop-off areas and access to student parking lots. From the signal at NW Bucklin Hill Road to the roundabout at Frontier Place NW, Central Kitsap School District has continuous property along the northeast side of NW Anderson Hill Road. A sidewalk extends along the northeast side of the roadway between NW Bucklin Hill Road and the roundabout at Frontier Place NW with a paved shoulder along the southwest side of the roadway, to within 150' of the roundabout. West of the roundabout, there are paved shoulders on both sides of Anderson Hill Road NW with varying width. Kitsap County has identified a sidewalk project for NW Anderson Hill Road between Provost Road NW and the roundabout at Frontier Place NW.

Frontier Place NW is a two-lane local roadway extending north from Anderson Hill Road NW (roundabout). Frontier Place NW provides access to 37 homes, a church and multiple school district operations including Central Kitsap Middle School (CKMS), the West Alternative High School (which includes the New Frontiers Middle School population previously housed north of the existing CKMS), the district transportation bus barn, the food service kitchen and the warehouse facility for education materials. Speed limit on Frontier Place NW is 25 MPH and the roadway has sidewalk along the school frontage and a paved shoulder on the west side.

NW Bucklin Hill Road is an east-west arterial in Silverdale with two travel lanes plus center turn lane adjacent to the high school. NW Bucklin Hill Road has sidewalks on both sides of the street and is posted for 25 MPH adjacent to the school. The intersection of NW Anderson Hill

Road at NW Bucklin Hill Road has signal control with crosswalks. The high school has two driveway access points to NW Bucklin Hill Road; one provides the entrance for buses and visitors, the other provides access to a small parking lot adjacent to portable classrooms.

Pedestrian and Bicycle Facilities

This segment of NW Anderson Hill Road adjacent to the project is part of a designated bicycle route in Kitsap County.

Pedestrian facilities in the study area were inventoried by AHBL staff for a one-mile walking distance from the schools, with a map (to the right and in the appendix) showing locations of sidewalks (green) and shoulders (yellow) available for student walk routes. Red lines on the diagram indicate that there is no available walkway along a roadway. NW Anderson Hill Road, NW Bucklin Hill Road and Frontier Place NW have sidewalks along the school frontage. Crosswalks exist on NW Anderson Hill Road at the Frontier Place NW roundabout and at the NW Bucklin Hill Road signal.

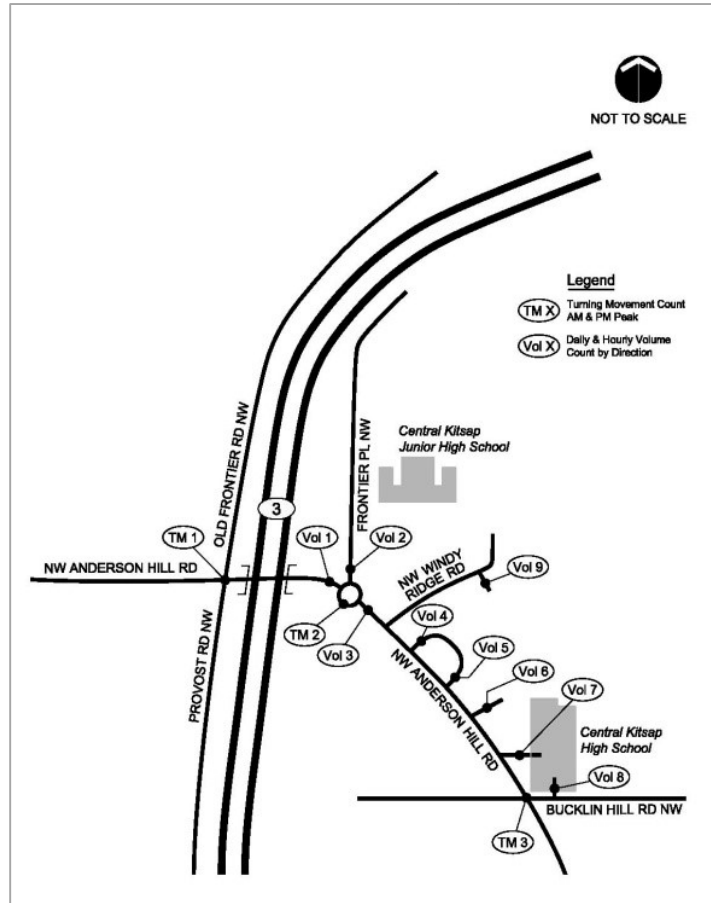

According to Kattie Nepper, Director of Transportation for Central Kitsap School District, the one-mile walk for Central Kitsap Middle School extends east on NW Bucklin Hill Road to Blaine Avenue, north on Silverdale Way to Ridgetop Boulevard, north on Randall Way to Plaza Avenue, and south on Silverdale Way to 8790 Silverdale Way. The area on Anderson Hill Road to the west of the roundabout at Frontier Place NW is served by buses. One area is missing a walkway within the CKMS walking area – along Silverdale Loop Road to the west of Bucklin Hill Road at Anderson Hill Road. This roadway extends into a low-volume neighborhood which is anticipated for redevelopment in the near future. Sidewalk or walkway can be expected to be implemented with a new housing development.

The one-mile walk for Central Kitsap High School extends west along NW Anderson Hill Road to Apex Road, north on Old Frontier Road to 10880 Old Frontier Road, east on NW Bucklin Hill Road to Cranway Avenue, south on Silverdale Way NW to 8187 Silverdale Way NW, north on Silverdale Way NW to NW Myhre Road and north on Randall Way NW to Highway 3. Within the walking area for the high school, several segments of local roads are missing walkways; however all are served with either sidewalks or shoulders along the arterial roadways.

## Traffic Volumes

Vehicle traffic volume counts were conducted in May and June 2016 to document current or baseline traffic conditions near the proposed HS/MS Replacement with counts during the school year. These counts document the current school district uses along Frontier Place that are planned to relocate to the Consolidated Transportation, Food Service and Warehouse (CTFW) facility on Dickey Road – these are the bus barn (Transportation), school food service production and distribution (Food Service), Science Kits storage, and the warehouse for District-wide learning materials and distribution (Warehouse). These counts document the current school district uses along Frontier Place that are planned to relocate to the Barker Creek Community School in East Bremerton – they are the West Alternative School, New Frontiers School, CKSD

Special Services Department and the daycare portable. The counts also document the existing high school traffic at multiple driveways onto Anderson Hill Road and Bucklin Hill Road – a combination of traffic associated with students, parents and employees to the school.

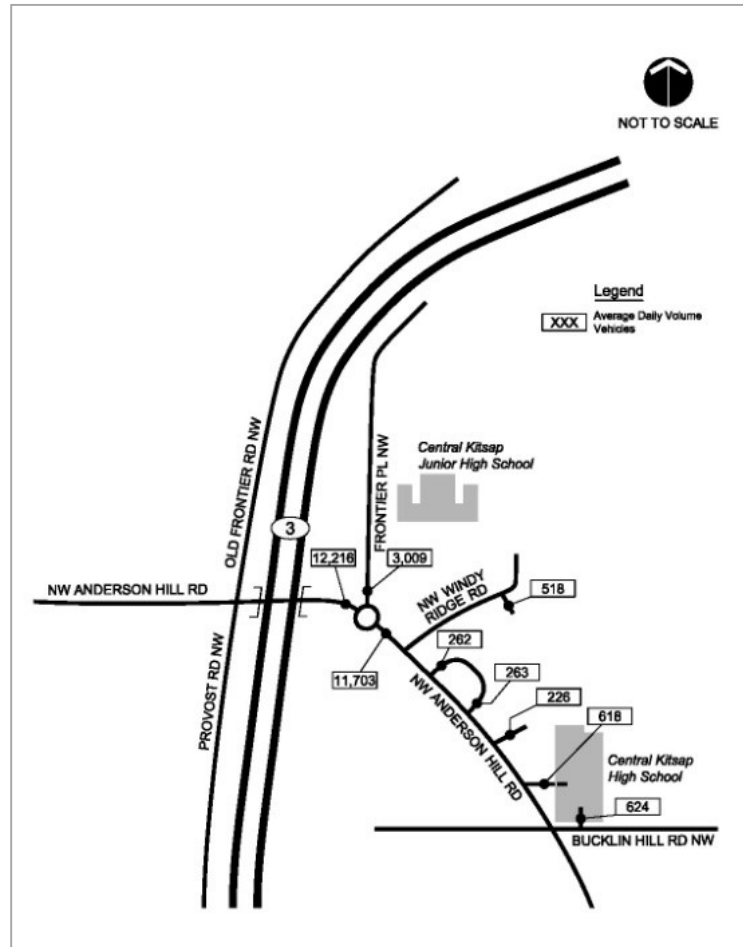

The 2016 count data helps to illustrate the current traffic volumes and patterns throughout the day for travel on NW Anderson Hill Road and through three key intersections (NW Anderson Hill Road at Provost Road NW, NW Anderson Hill Road at Frontier Place NW (roundabout) and NW Anderson Hill Road at NW Bucklin Hill Road). The counts were conducted during the construction of NW Bucklin Hill Bridge at Clear Creek when the roadway was closed for construction which may have affected the arterial traffic volumes on NW Anderson Hill Road. The NW Bucklin Hill Bridge was re-opened in late July 2016.

Traffic counts for the several days measured on NW Anderson Hill Road reflect a very regular daily traffic volume and flow on this arterial. The roadway is classified as an urban minor arterial roadway with an estimated roadway capacity of 11,100-11,500 vehicles per day. The counts collected indicate that the roadway operates near its capacity on weekdays where travelers on the roadway during the peak periods can experience congestion and delays at the signals.

Traffic counts on Frontier Place NW indicate that the roadway operates under the capacity threshold for the local roadway, however, there are periods of congestion and delays which are associated with the CKMS facility, specifically associated with parent drop off and pick up activities.

Frontier Place NW traffic reflects school operations and activities, with an average 3009 vehicles per day (vpd) on the roadway. The 37 homes and church are estimated to generate about 350 vpd of the total, or around 12% of the traffic is residential. The Transportation, Food Service and Warehouse (bus barn, kitchen and warehouse) operations generate an estimated 850 vpd of the traffic on Frontier Place (information assembled as part of the Consolidated Transportation Food Services and Warehouse (CTFW) project) – comprised of bus trips, management, employee trips and deliveries – around 28% of the total traffic on Frontier Place.

What makes up the rest of the Frontier Place NW traffic is travel to/from the Middle School and the Alternative High School sites – about 1,810 vpd to serve the 952 students at the middle school and alternative high school. The resulting trip generation rate for the Middle and Alternative High schools is 1.9 daily vehicle trips per student. This trip generation rate for the schools is higher than the average trip generation rate for middle school (Land Use Code 522) as documented in the Institute of Transportation Engineers (ITE) Trip Generation Report (9<sup>th</sup> Edition, 2012, an industry reference) and lies within the overall data range cited by ITE.

Additional traffic data was collected in January 2017 by school district personnel at the CK Middle School for both morning parent drop off and afternoon parent pick up activities. 300 parent vehicles were observed to drop off students in the morning peak hour for the Middle School and 95 parent vehicles were observed to pick up students in the afternoon peak hour for the Middle School. According to Scott McDaniels, CKMS principal, this high level of parent drop off and pick up activity is due, in part, to the high numbers of CKMS students who come from outside the District. Students who attend from outside the District do not have access to District

Transportation (buses) which results in higher volumes of parent vehicle traffic to the school. This information was used to update the anticipated site trip generation for the new Middle School facility.

CK High School traffic volumes amount to an average of 2,600 vpd for the high school, from the various driveways (plus an estimated amount at two small lots). Using the 1,490 student enrollment for the school, this translates into a trip generation rate of 1.74 vehicle trips per day per student, or a rate comparable to the average trip generation rate (ITE Land Use Code 530, 1.71 trips per day per student).

Turning movement counts collected at the three key intersections were compared with other counts conducted at the signalized intersections. The counts at NW Anderson Hill Road and Provost Road NW are comparable to count values reported by Kitsap County for a November 2015 count (and are attached for reference.) Counts conducted in 2013 by Kitsap County for a NW Bucklin Hill Road study indicate the same high movements, but appear to be higher in 2013 than the counts in 2016. This could be a function of the NW Bucklin Hill Bridge construction and closure – where travel patterns have shifted and may be expected to return to previous patterns.

Traffic volumes fluctuate throughout the day and by day of week – the counts collected in May and June of 2016 reflect a sampling of the traffic flows at and near the CK High and CK Middle schools. These volumes were used to calculate trip generation rates for the existing school facilities, for use in estimating the expected site traffic for the project.

### Existing Schools and Access

Frontier Place NW is a roadway serving both school district uses (middle school, bus barn, food service, warehouse, alternative high school) and a combination of single family homes (37) and a small church. The combined traffic from these several uses results in the traffic volumes counted on the roadway.

CK Middle School has access only to/from Frontier Place NW. CK High School has multiple parking lots and driveways and thus the site traffic for the school is a combination of driveway volumes from NW Anderson Hill Road and NW Bucklin Hill Road. The current enrollment for the 2016-2017 school year (as of October 2016) reflects 719 students at CKMS, 233 students at the Alternative High School (West campus) and 1,490 students (1,360 FTE) at CKHS.

Current Traffic Operations

Existing intersection operations were modeled and analyzed using Synchro 9 traffic analysis software with the current traffic volumes for both the morning school peak hour (7-8 AM) and the afternoon school peak hour (2-3 PM) for the study area network. **Figure 1** shows the current traffic volumes for the study area intersections, NW Anderson Hill Road at Provost Road NW, at Frontier Place NW and at NW Bucklin Hill Road. **Table 1** provides a summary of current traffic operations at study area intersections for the school peak hours.

Kitsap County has established Level of Service (LOS) D as the operational standard for intersections within the County’s urban growth boundary (UGB). Silverdale lies within the UGB. Kitsap County has not adopted a LOS standard for driveway operation.

Intersection level of service (LOS) is a measure of the operation of the traffic control at the intersection, measured in seconds of delay per vehicle averaged over the analysis period. Intersection levels of service range from LOS A to LOS F, where LOS A reflects a low level of vehicle delay with very good operation of traffic through the intersection and LOS E represents a theoretical capacity of the intersection and LOS F reflects breakdown conditions with high levels of vehicle delay.

**Table 1 Current Traffic Operations at Study Area Intersections**

Location	AM School Peak Hour (7-8 AM)	PM School Peak Hour (2-3 PM)
NW Anderson Hill Road at Provost Road NW, signal	LOS C (34 seconds/vehicle average delay)	LOS C (26 seconds/vehicle average delay)
NW Anderson Hill Road at Frontier Place NW, roundabout	LOS C (19 seconds/vehicle average delay)	LOS E (42 seconds/vehicle average delay)
NW Anderson Hill Road at Bucklin Hill Road NW, signal	LOS C (23 seconds/vehicle average delay)	LOS C (27 seconds/vehicle average delay)

Current traffic flows through the roundabout can experience queues and backups, specifically during the morning school peak at the CK Middle School where on-site space for parent drop-off activity is very limited and traffic can backup along Frontier Place from the school driveway to the roundabout for brief periods. At other times, traffic queues can extend along NW Anderson Hill Road from the signal at Provost Road NW and can block up the roundabout operation. Analysis for the roundabout intersection operation incorporates the current peaking characteristics of the CK Middle School traffic where arrivals and departures are condensed into a 25-30 minute period within the peak hour for the school.

NOT TO SCALE

**Figure 1**  
2016 Volumes at Study Area Intersections

## **Planned Projects and Changes**

As noted earlier, three school district functions will be relocated from Frontier Place NW to Dickey Road NW – Transportation, Food Services and Warehouse – at a combined facility. This will result in less traffic on Frontier Place NW, approximately 850 daily vehicle trips. The District also plans to relocate the Science Kits storage and the West Alternative High School campus to other District building locations.

Kitsap County has two capital projects planned for 2019 construction. A project at the intersection of NW Anderson Hill Road and Provost Road NW will add a southbound right turn pocket to increase intersection capacity and help ease peak period operation. Another project along NW Anderson Hill Road will construct a shoulder along the west side from 300 feet west of the roundabout to 480 feet east of the roundabout.

## **Future Baseline Traffic without Replacement Project**

The High School & Middle School Replacement is scheduled with buildings to be completed for the 2019-2020 school year and the fields will be completed thereafter in 2020. Year 2020 was identified to represent the year of opening for the project. Traffic volumes for the 2020 baseline future year (2020 AM and 2020 PM) were developed by first removing school district traffic and by applying a 1.5% annual growth rate (total 6% growth) to the background traffic in the study area, onto which the new school campus traffic can be added. The background traffic reflects a theoretical traffic condition where HS and MS traffic was removed and traffic from CTFW and relocated facilities was removed.

## High School & Middle School Replacement Project Traffic

The traffic analysis for the Central Kitsap High School and Middle School Replacement is based on an enrollment of 1,500 high school and 800 middle school students on site. The proposed site will have a designated access drive off of NW Anderson Hill Road for the Middle School drop-off/pick up and visitor traffic and will also have a designated bus access drive and loading area off of Frontier Place NW. Two additional driveways on Frontier Place NW will provide access to staff and student parking and access to the High School drop-off/pick up area.

The proposed project will provide 472 parking spaces distributed throughout the reconfigured campus, plus an additional 29 spaces for use during special events within the bus loop. When the new schools open, an additional 86 spaces will also be available on the existing CKHS site to the south for an interim parking total of 587 spaces. After the existing CKHS site is redeveloped with a ball field, 92 permanent parking spaces will replace the existing 86 spaces at that location, for a total of 593 total parking spaces at project completion.

### Trip generation

Traffic generated by the project is based on the trip generation rates derived from the traffic counts collected in May/June 2016 and student enrollment anticipated for the facility plus updated for the morning peak hour to reflect recent counts of Middle School parent traffic.

This traffic analysis is based on traffic generated by a total of 1,500 high school students plus 800 middle school students, using the trip generation rates specific to the existing schools. By using these enrollment values, the analysis reflects a conservative approach to evaluate the expected operation of the campus site access points and traffic operation at the nearby roundabout.

January 2017 observations at the Middle School revealed a high level of parent vehicle activity especially in the morning peak hour (300 parent vehicles entering, 300 parent vehicles exiting). The afternoon parent vehicle traffic, as observed, was in line with estimates based on the ITE Trip Generation rates applied. The estimated trip generation for the Middle School was increased by 120 entering vehicles and 120 exiting vehicles to better reflect the anticipated morning peak hour for the school, with over 100 students attending from outside the District.

**Table 2** provides a summary of the expected site traffic for the HS & MS Replacement project.

**Table 2 Site Traffic (Revised)**

Site Traffic and Trip Generation									
	Daily Site Traffic			Morning School Peak Hour Traffic			Afternoon School Peak Hour Traffic		
	Total Vehicle Trips	Entering Vehicle Trips	Exiting Vehicle Trips	Total Vehicle Trips	Entering Vehicle Trips	Exiting Vehicle Trips	Total Vehicle Trips	Entering Vehicle Trips	Exiting Vehicle Trips
High School - 1500 students	2620	1310	1310	830	540	290	380	133	247
Middle School - 800 students	1760	880	880	672	358	314	240	108	132
Total Estimated Site Traffic	4380	2190	2190	1502	898	604	620	241	379

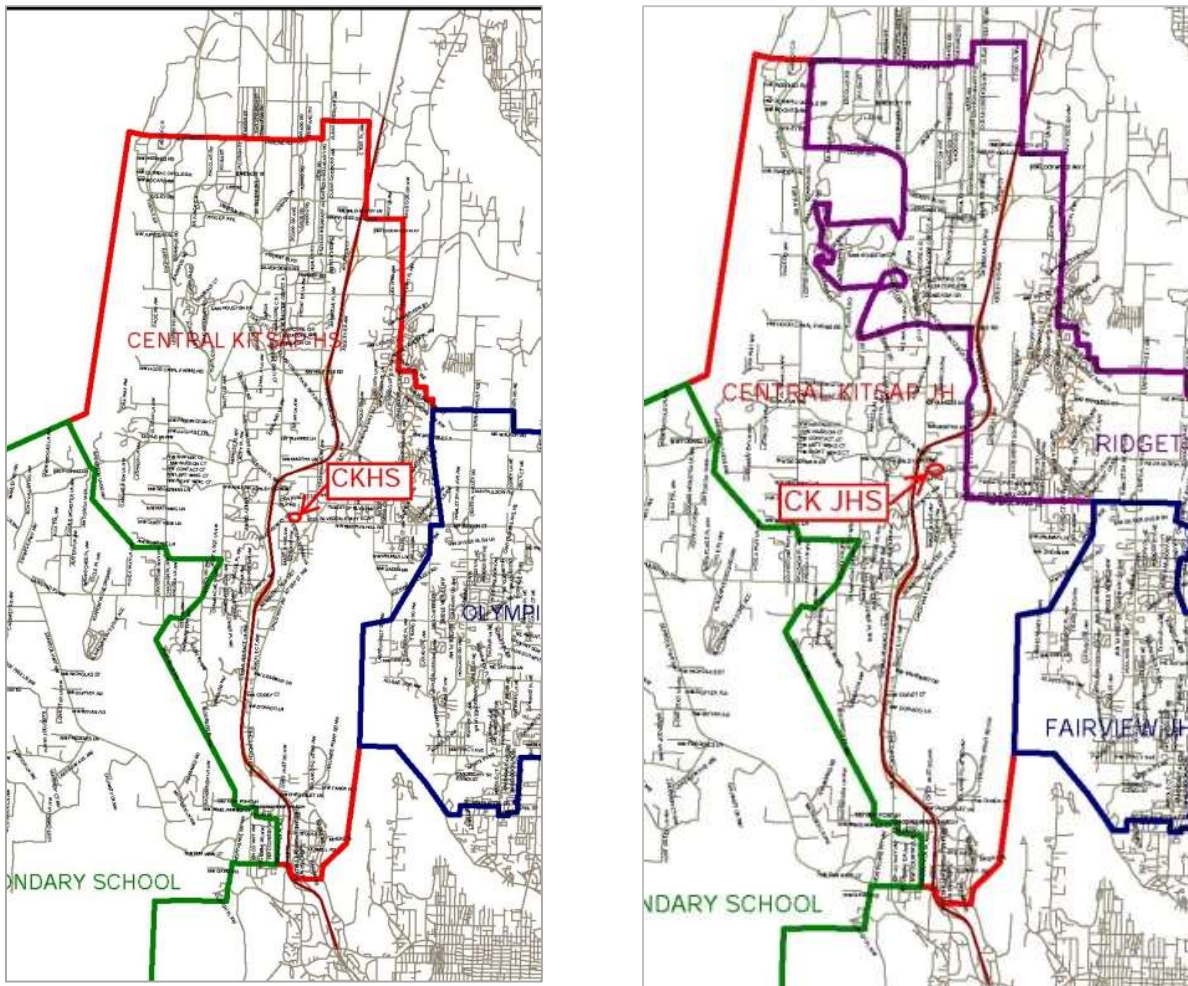

Daily traffic for the planned schools is estimated at 4,380 vehicle trips per day (2,190 trips into the site and 2,190 trips out from the site each school day). Current combined traffic of the existing high school, middle school and alternative high school is estimated at 4,410 vehicle trips per day, based on the May/June 2016 counts conducted. The projected daily traffic would be very close to the existing traffic generated by the schools in the study area – which now include the 719 middle school students plus 233 students at the alternative high school and 1,490 high school students (1,360 FTE) at the main campus, a total of 2,442 students.

The estimated site traffic for the CK High School and Middle School Replacement would be approximately the same as the current amount of daily traffic generated by the existing High School, Middle School and the West Alternative High School on site. When considering the net change in school-based traffic on Frontier Place NW and NW Anderson Hill Road (with the relocated Transportation, Food Service and Warehouse operations plus the relocated Alternative High School and the Science Kits storage), the CK High School and Middle School Replacement project represents a net balance in daily traffic generated by the School District.

Arrival and dismissal times for the schools are currently 7:25 AM and 2:05 PM for the middle school and 7:50 AM and 2:35 PM for the high school. This analysis reflects the continued school operation with a half hour interval between the afternoon bell times for these two schools, and thus reflects a worst case analysis with the two peaks of site traffic occurring within the single peak hour for the facility. Morning peak hour for the schools is between 7 and 8 AM. The afternoon peak hour for the schools is between 2 and 3 PM.

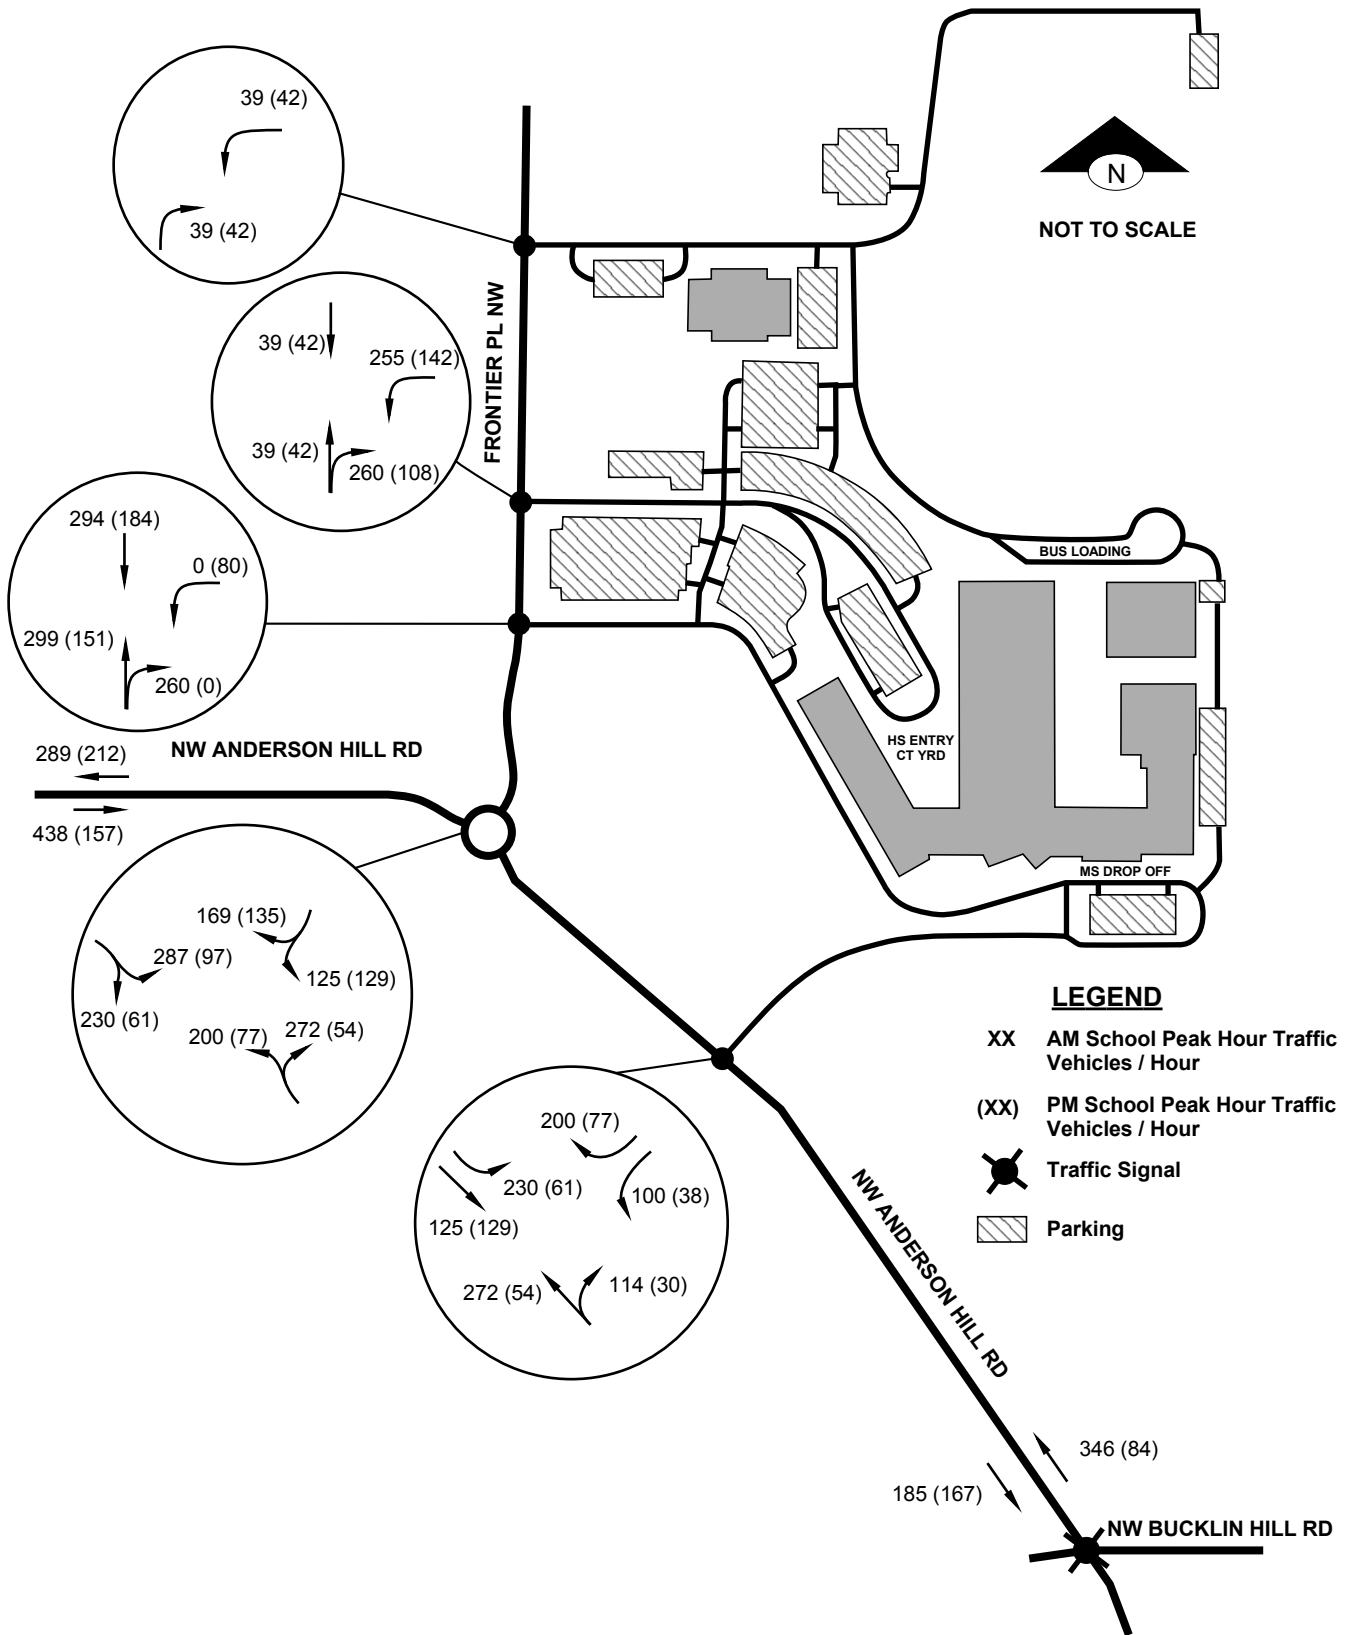

### Trip Distribution and Assignment

The distribution of schools project traffic to the study area network is based on a review of the areas served by each school. The adjacent figures show the serving area for CKHS and CKMS (shown as CKJHS in the figure). For this analysis, high school traffic was assigned with half oriented to the east and half oriented to the west via NW Anderson Hill Road. Middle school traffic was assigned with one-third oriented to the east and two-thirds oriented to the west via NW Anderson Hill Road. Since this is a replacement project within the same properties, outside the limited study area for this study, high school and middle school traffic would be comparable to the existing traffic already on the network.

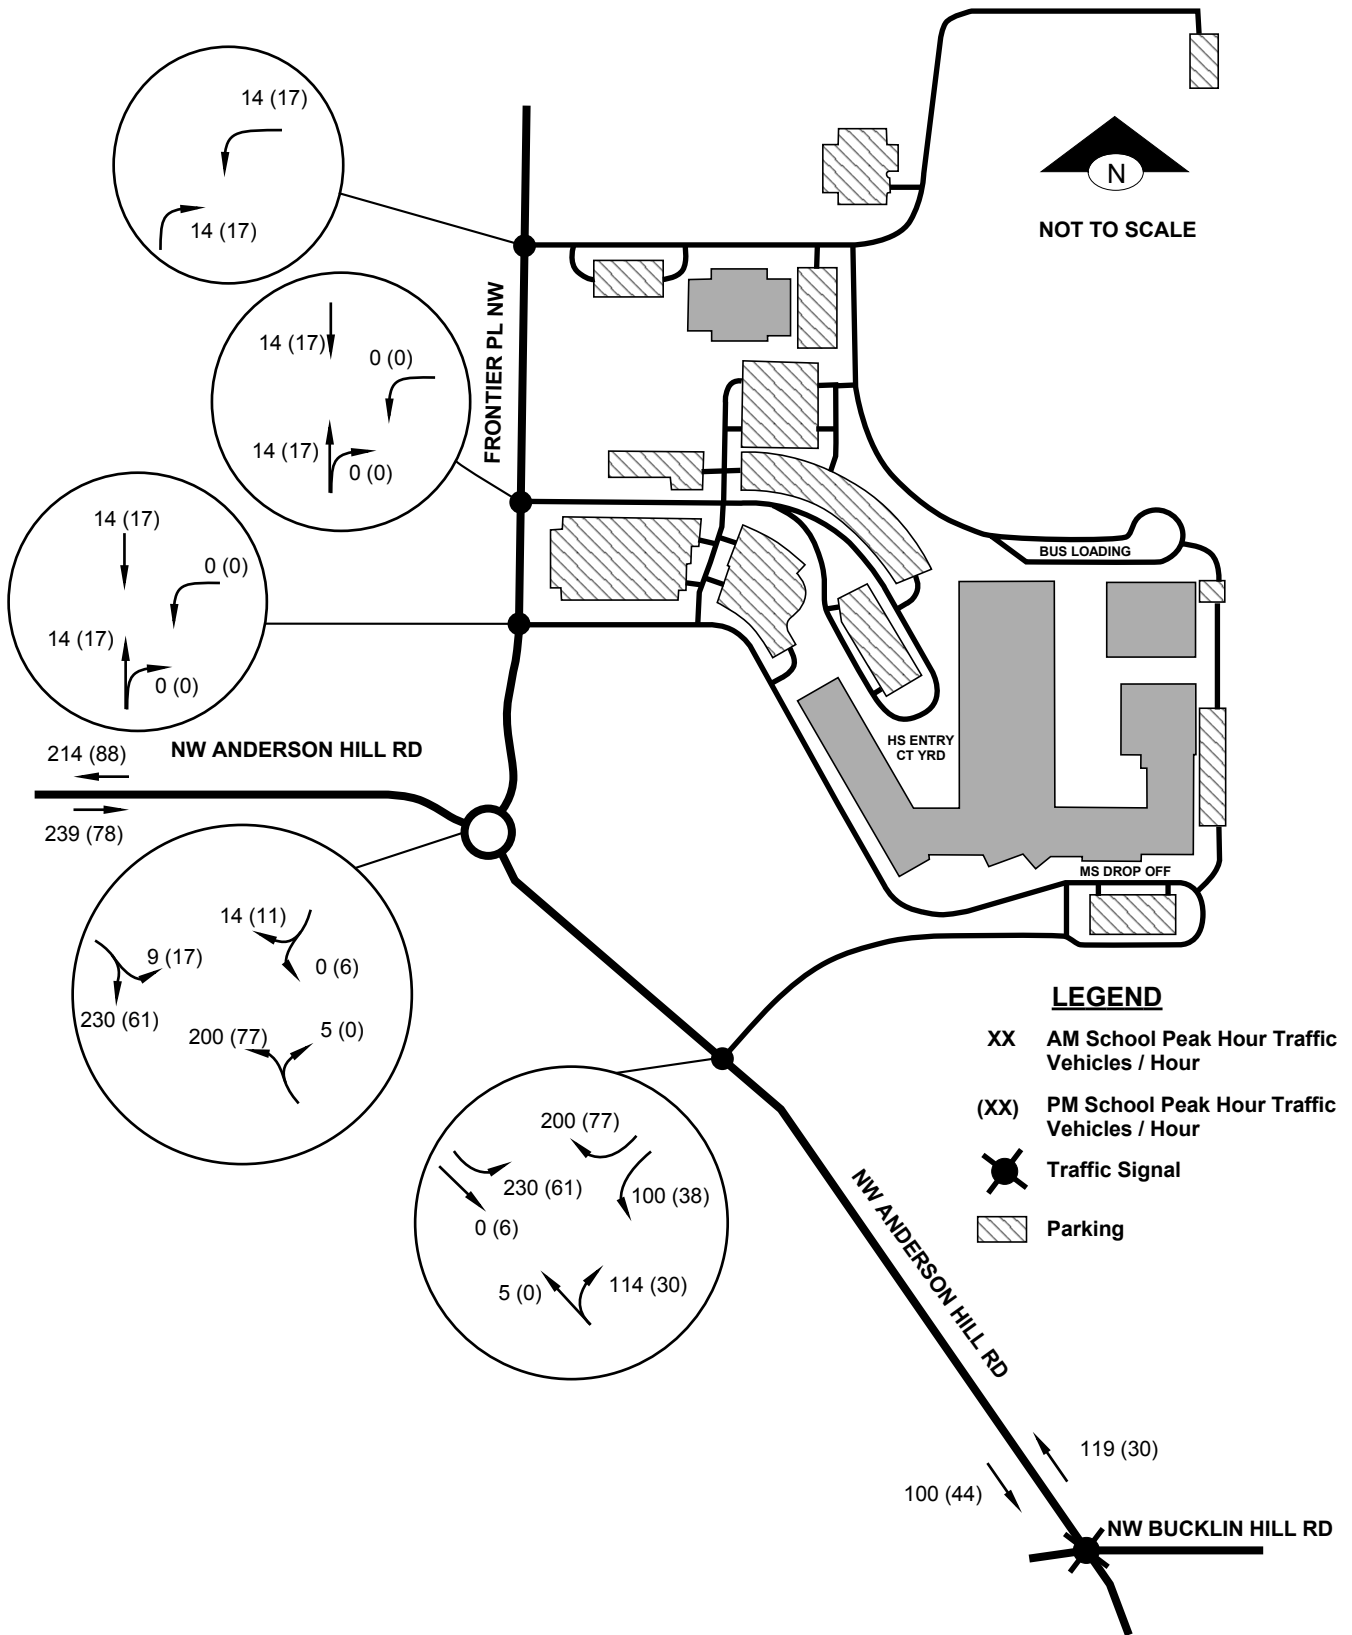

**Figure 2** shows the traffic assignment of the project traffic to and from the high school and middle school for both the morning and afternoon peak hours for the schools, under the current half-hour separation for start and end times at the schools. **Figure 2a** shows the traffic assignment for just the Middle School traffic for both the morning and afternoon school peak hours. **Figure 2b** shows the traffic assignment for just the High School traffic for both school peak hours.

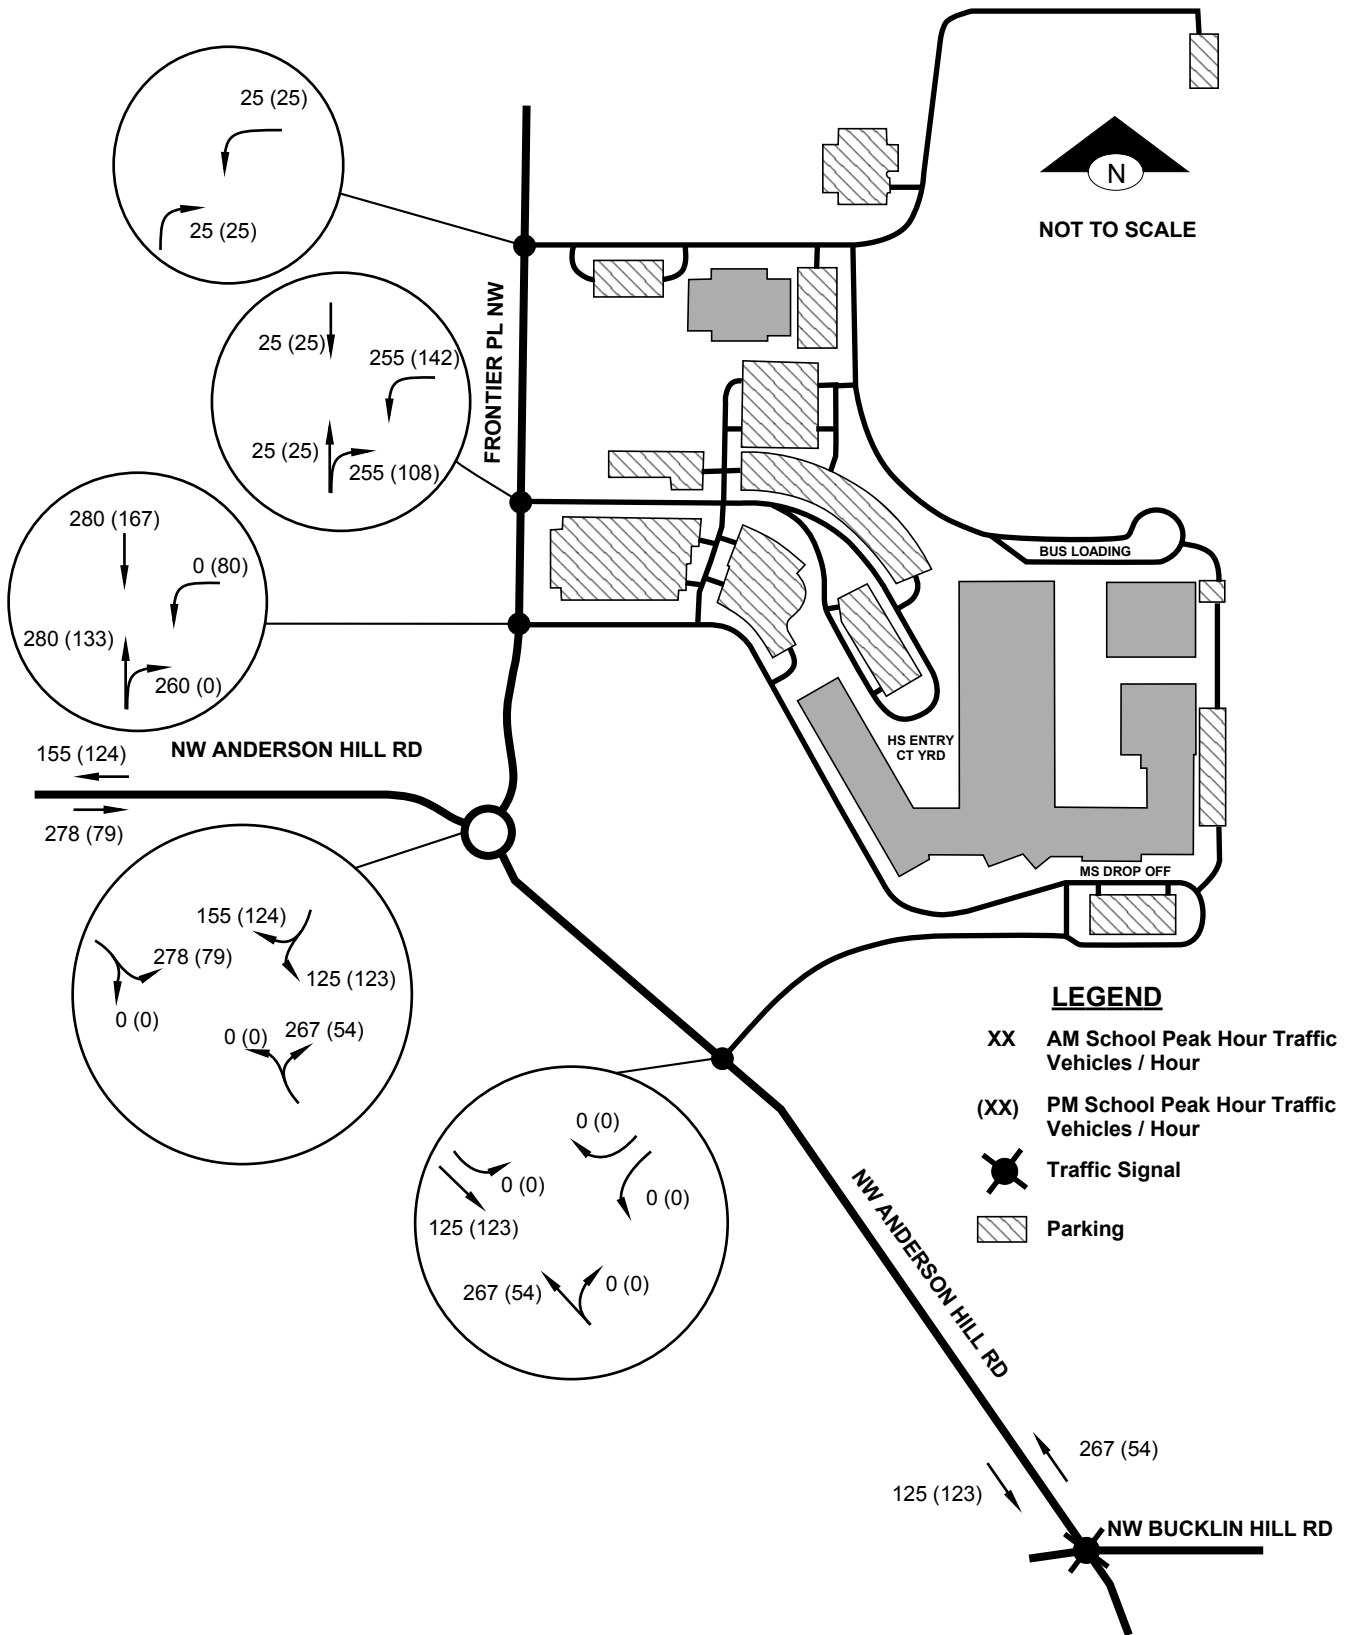

**Figure 2**  
HS / MS Replacement  
Site Traffic

**Figure 2a**  
MS Replacement  
Site Traffic

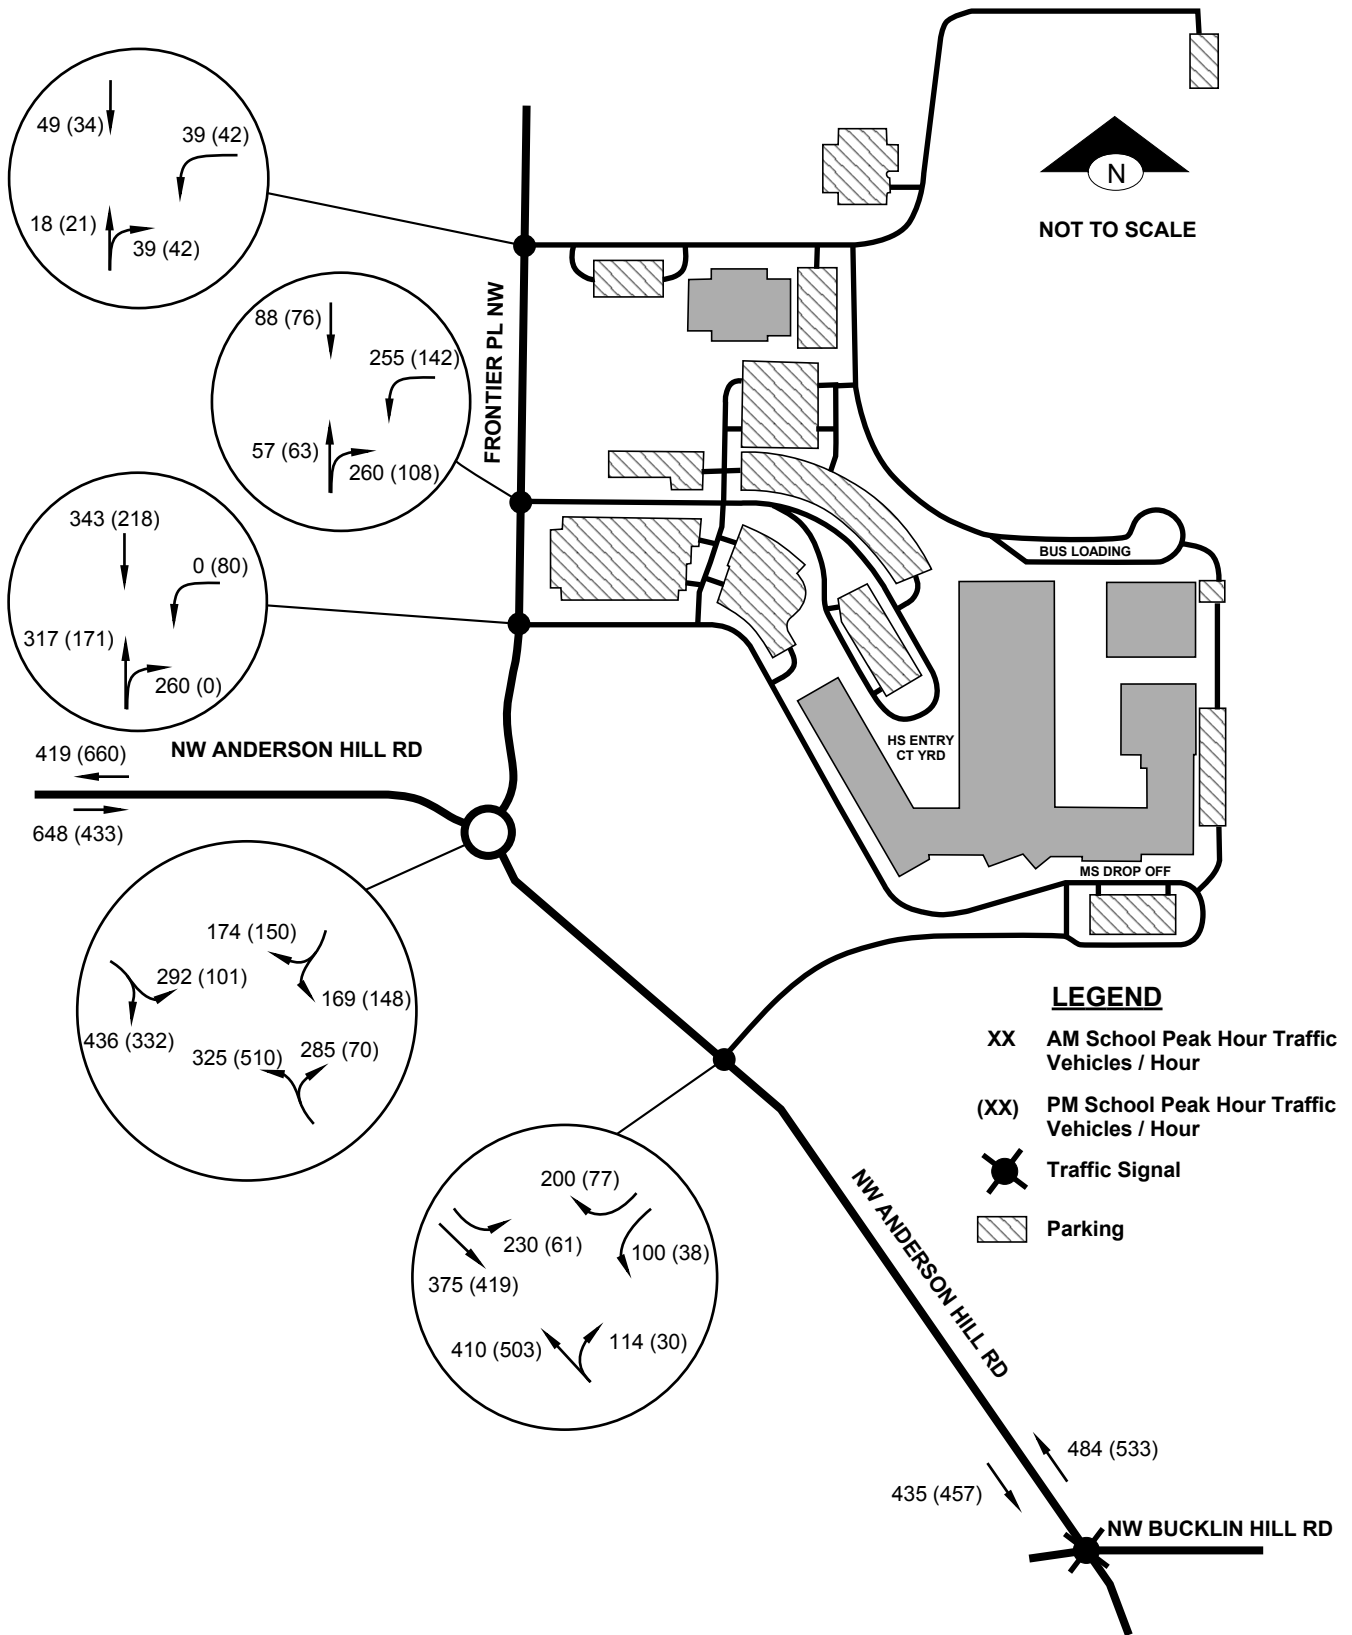

**Figure 2b**  
HS Replacement  
Site Traffic

**Figure 3** shows the expected study area traffic in year 2020 with the High School & Middle School Replacement project complete and in operation under the current half-hour separation for start and end times at the schools. This represents the worst case or highest level of site traffic conditions for the HS and MS Replacement Project.

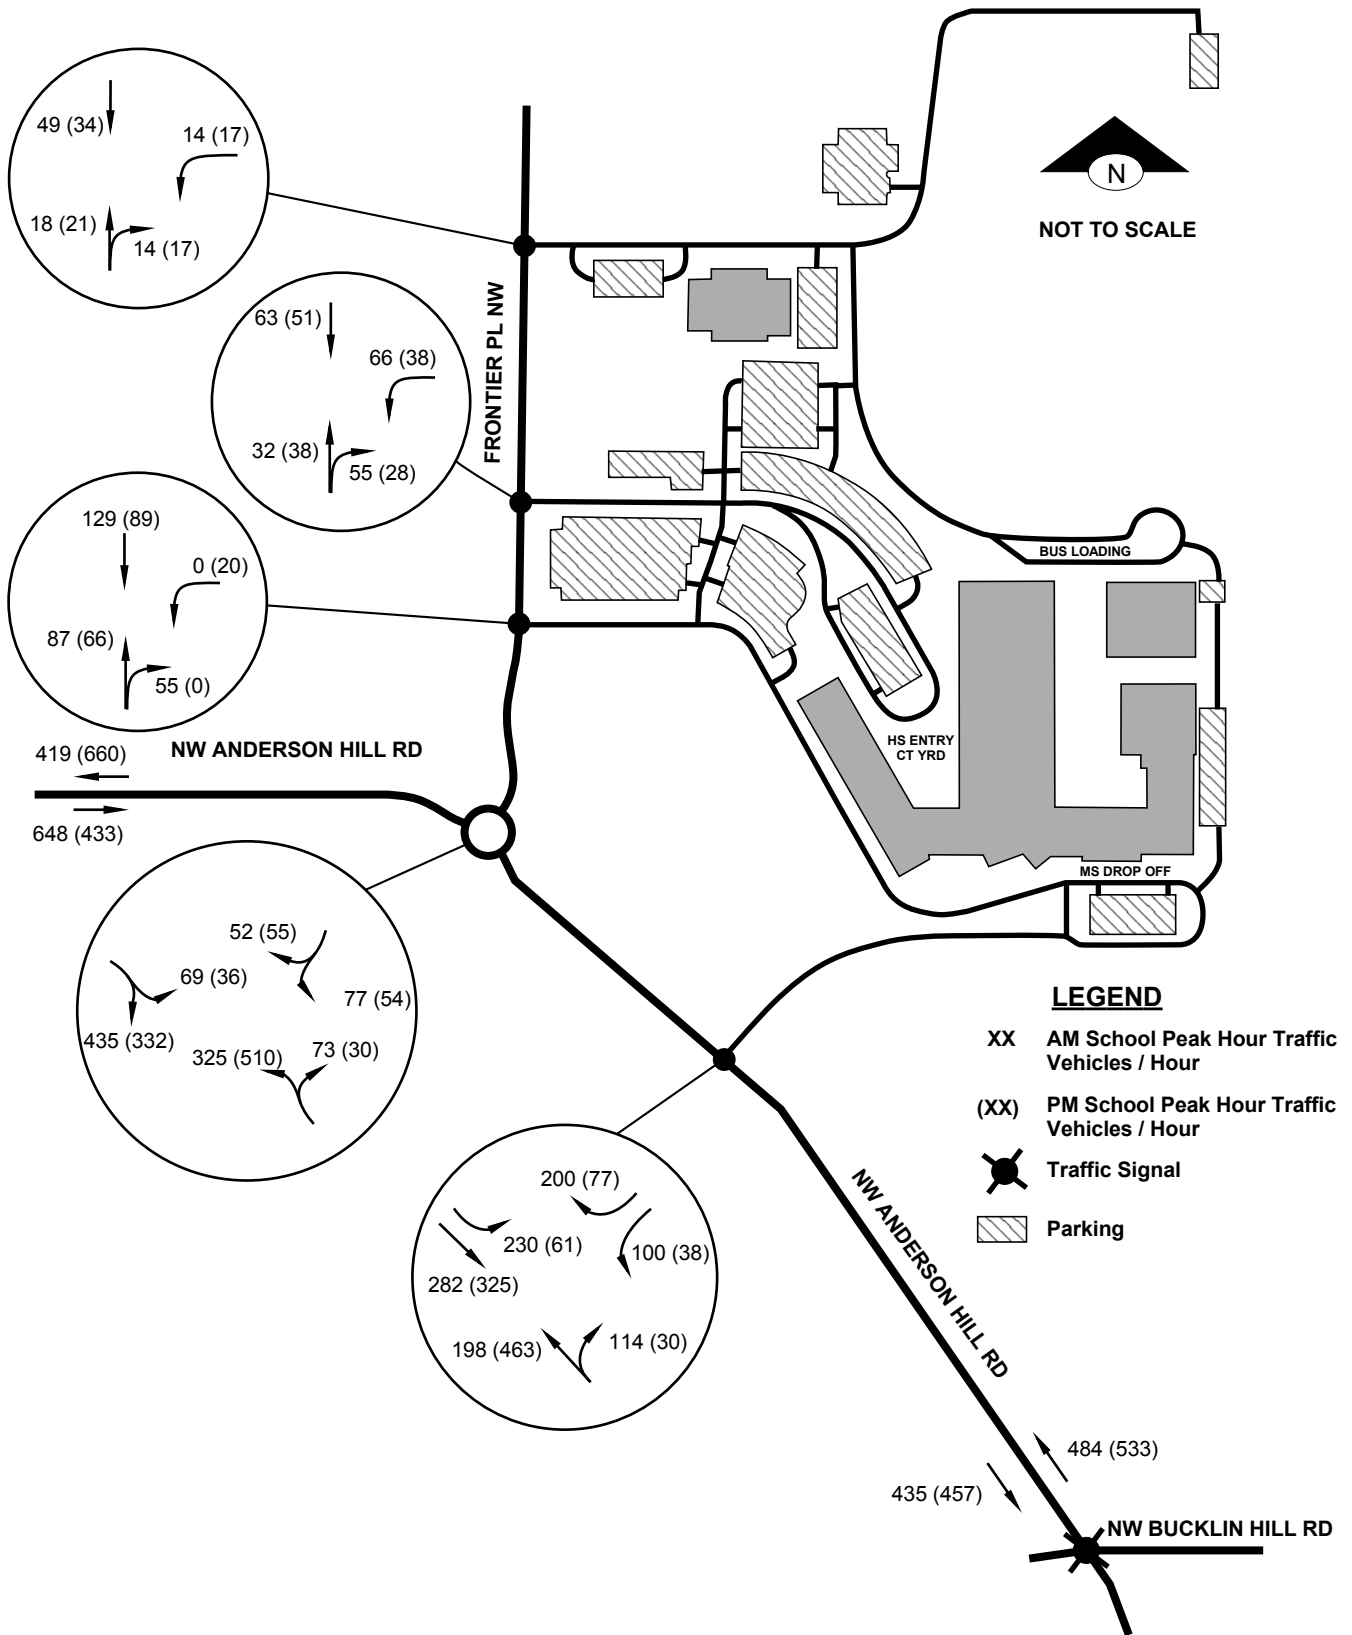

The school district has considered implementing a common bell schedule for High School and Middle School classes for the combined schools and this could allow for one school to start one period ahead of the other school.

**Figure 3a** shows the resulting traffic conditions for the Middle School starting within the 7-8 AM morning peak hour and ending within the 2-3 PM afternoon school peak hour. The site traffic for this condition includes some amount of High School traffic activity within the same hour, approximately one quarter as much traffic as during the peak hour for the High School, to reflect some of the early activity at the High School.

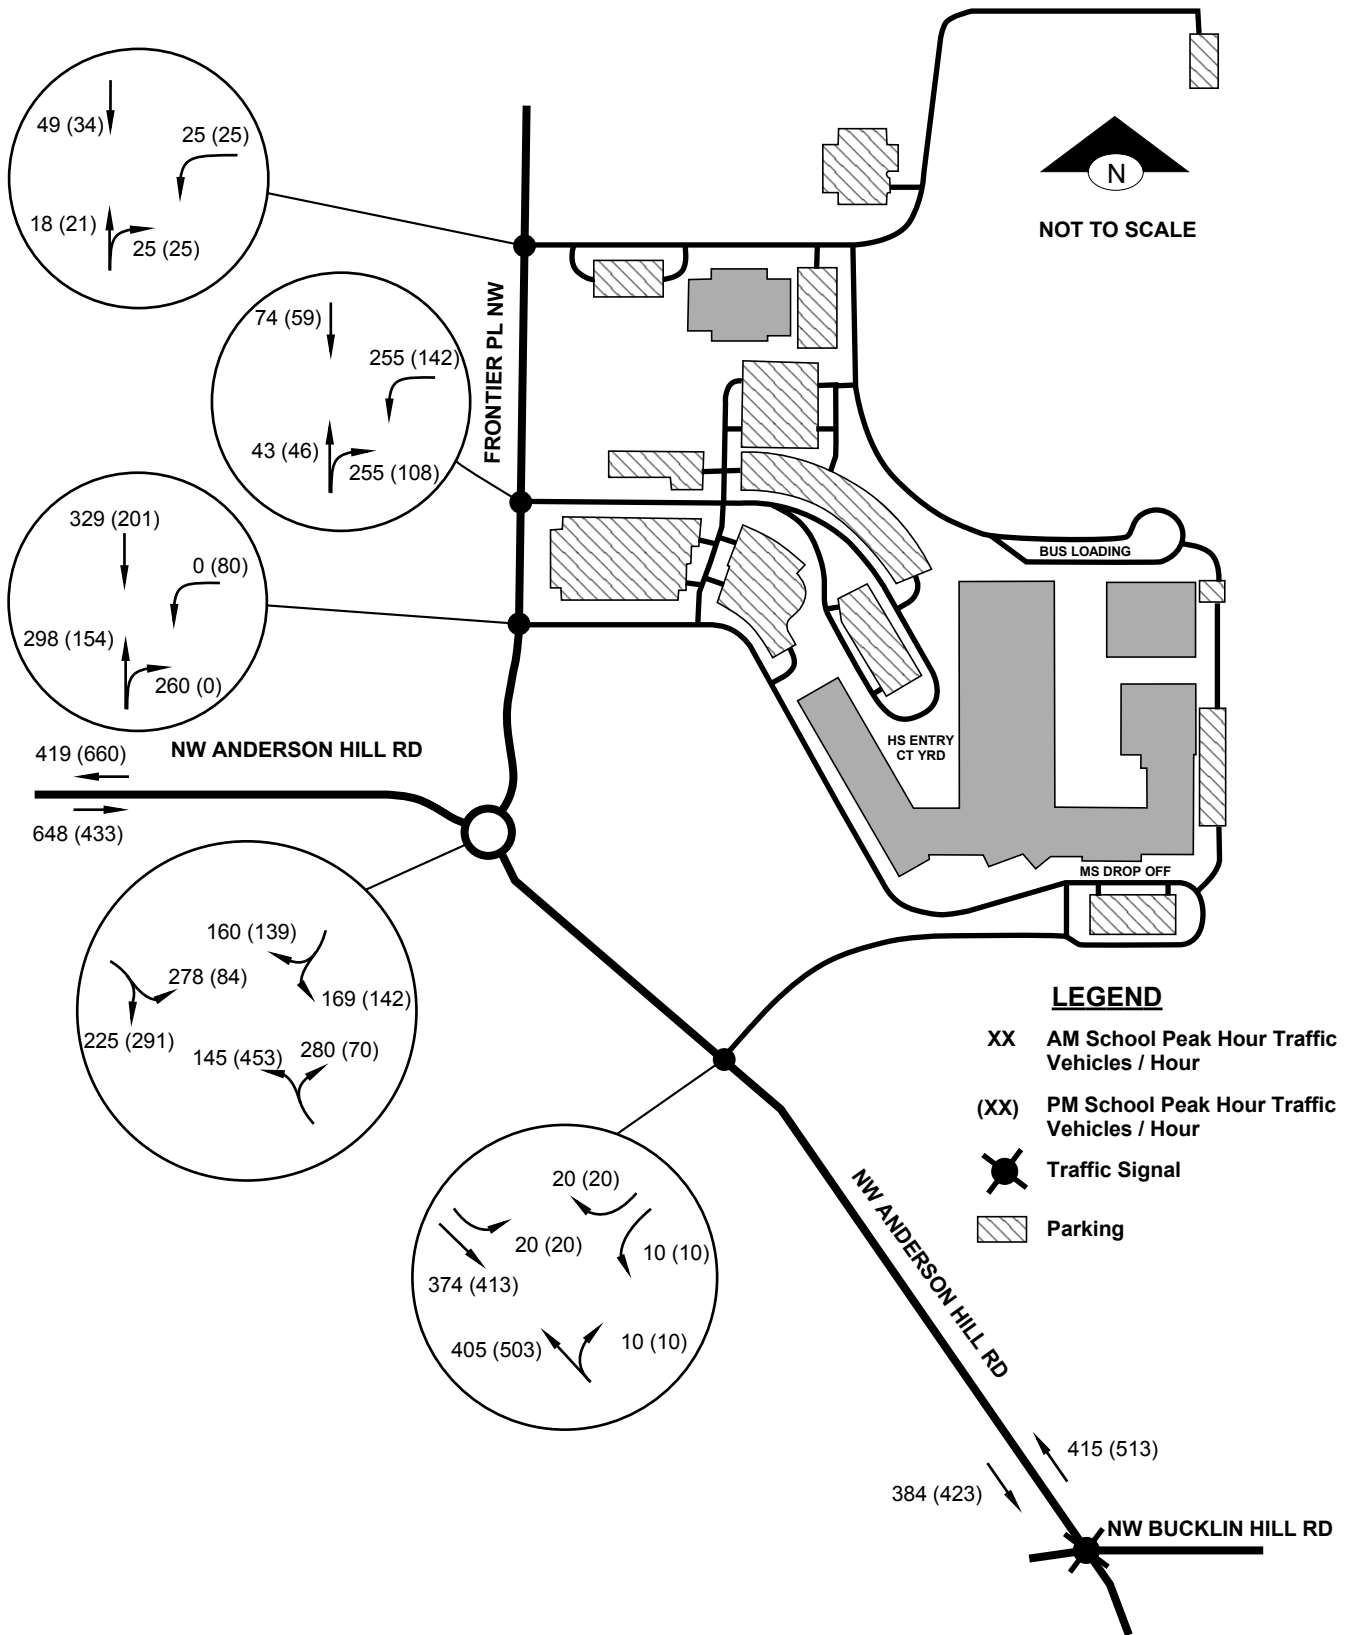

**Figure 3b** shows the resulting traffic conditions for the High School starting within the 7-8 AM morning peak hour and ending within the 2-3 PM afternoon school peak hour. The site traffic for this condition includes some amount of Middle School drop off activity within the same hour at the Middle School driveway.

**Figure 3**  
2020 with HS / MS Replacement

**Figure 3a**  
2020 School Peak Hour with MS Replacement

**Figure 3b**  
2020 School Peak Hour with HS Replacement

### Traffic Operations with Project

**Table 3** provides a summary of the expected year 2020 Traffic Operations with High School and Middle School Replacement project, for the combined schools starting within a single hour and for the separate start times for each school within the school peak hours. These conditions represent the range of possible traffic conditions for the HS and MS Replacement project.

Future operation in year 2020 is expected to improve during the afternoon school peak hour for regular school days over current traffic operation of the roundabout at NW Anderson Hill Road and Frontier Place NW.

However, the roundabout is expected to operate worse in the morning peak with the Replacement project where both schools would start and end within the same hour, failing to meet the Kitsap County level of service (LOS) standard. Future traffic operation with a single school start and end within the peak hour would meet the Kitsap County level of service standard.

CKMS will have improved access overall, with the proposed parent drop-off located further from the public street, providing more on-site space for loading and waiting for students. The new location for the Middle School access driveway is designed to better manage the on-site queues drop off activity plus provide separate left-turn and right-turn lanes for leaving the site. The project will locate the Middle School access driveway over 450 feet from the roundabout and will construct a left-turn pocket on NW Anderson Hill Road with 250 feet of storage (enough for 10 cars) to facilitate left-turns entering the school. The new driveway will be located with increased spacing from the roundabout to provide for a backup approaching the roundabout from the south (up to 18 cars) plus space for stopping sight distance at the 25 MPH posted speed limit (155').

**Table 3 2020 Future Traffic Operations with HS/MS Replacement (Revised)**

Location	Morning Peak Hour, 7-8 AM				Afternoon Peak Hour, 2-3 PM

\* Kitsap County has adopted a level of service (LOS) standard for intersection operation at LOS D for intersections within the Urban Growth Boundary, such as Silverdale.

\*\* Kitsap County has not adopted a LOS standard for driveway operation.

\*\*\* Exiting Left Turn traveler can avoid delays and turn right, then travel around Roundabout.

Site Driveways and Sight Distance Evaluation

Using survey information for the centerline of NW Anderson Hill Road and for the centerline of Frontier Place NW along the project frontage the available sight distance was determined for each of the proposed driveways to the High School and Middle School Replacement campus, as noted in the table below. For travel on these roadways with posted speed of 25 MPH, the intersection sight distance required for passenger cars is 275 feet and for buses and single unit trucks is 350 feet. Sight distance at the driveways meets the requirements as defined in WSDOT Design Manual (M22-01.12, November 2015).

**Table 4 Intersection Sight Distance at HS & MS Replacement Driveways (Revised)**

Driveway Location	Available Sight Distance		Required Sight Distance	Meets Requirements?
Middle School Access to NW Anderson Hill Road	to Northwest	> 450 feet	275' passenger car, 350' bus	Yes
	to Southeast	> 400 feet	275' passenger car, 350' bus	Yes
South Driveway Access to Frontier Place NW	to North	> 400 feet	275' passenger car	Yes
	to South	300 feet, to roundabout	275' passenger car	Yes
High School Access to Frontier Place NW	to North	> 400 feet	275' passenger car, 350' bus	Yes
	to South	> 500 feet, to roundabout	275' passenger car, 350' bus	Yes
Bus Access to Frontier Place NW	to North	> 500 feet	275' passenger car, 350' bus	Yes
	to South	> 400 feet, beyond next driveway	275' passenger car, 350' bus	Yes

Special Event Traffic

The High School & Middle School Replacement will include improvements to the sports fields and facilities that can accommodate competition events, which is a change from the existing school sites. The proposed football and soccer field will include seating for up to 1,500 spectators. The proposed on-site parking supply of 587 interim parking spaces and 593 ultimate parking spaces is expected to meet the parking demand for the CKHS football games, based on the experience for existing football games held at Silverdale Stadium.

Currently the Central Kitsap High School football games are held at a common location at Silverdale Stadium which serves all the high schools in the district. Silverdale Stadium is co-located with Olympic High School on Stampede Boulevard NW. There are 4-5 home football games per year which start typically at 7:15pm. Approximately 1,000 spectators attend a varsity game at Silverdale Stadium, possibly higher with an in-district opponent. Currently, the 358 spaces of parking at Olympic HS is not always sufficient for the parking demand at a game, and overflow parking can extend along Stampede Boulevard and into the tennis court parking nearby. Below is a summary of the types of games and events held at the schools.

**Central Kitsap Middle School Athletics (outdoor athletics only)**

	# of Home Games	Approx. # of spectators
Football (varsity, jr. varsity)	3 each	75-100
X-Country	3	100-125
Girls Soccer (varsity, jr. varsity)	4-5 each	50-75
Fastpitch	5	50-75
Track/Field	3-4 reg season + potentially 1 sub-district and 1 league game	300-400
Community sports include: Lacrosse Youth soccer Boys baseball Priv. School Fastpitch Track/Field from Peace Lutheran Girls on the Run x-country	Occasional use  1 meet only	     10-12 girls

**Central Kitsap High School Athletics (outdoor athletics only)**

	# of Home Games	Approx. # of spectators
Football (varsity, jr. varsity, c-team)	4-5 reg season +1 for playoff	Varsity = up to 1500 JV = 100 C-team = 50-75
X-Country	Up to 4 meets	300
Boys Soccer (varsity, jr varsity)	8-9 games each	400
Girls Soccer (varsity, jr. varsity)	8-9 games each	200
Fastpitch	10 games	100
Baseball	10 games	150
Track/Field	4-5 meets	300

## Summary and Overview

Central Kitsap School District will construct the High School and Middle School Replacement project which will replace several district buildings and functions at the CKHS and CKMS sites and form a centralized, shared and integrated high school and middle school campus to better serve students, faculty and the community.

The project will construct four access driveways and will include frontage improvements of sidewalk along NW Anderson Hill Road and Frontier Place NW. Access to the Middle School from NW Anderson Hill Road will be located over 450 feet from the roundabout, with a left-turn pocket with 250 feet of storage for entering traffic. The main access to the High School will be from Frontier Place NW.

Overall daily site traffic generated by School District facilities in the area is expected to remain about the same with the HS & MS Replacement project. Operation of the combined HS and MS site traffic through the roundabout on NW Anderson Hill Road at Frontier Place NW would not meet Kitsap County LOS D standard for intersection operation during the morning peak hour with both schools starting within a single hour.

Potential mitigation for the roundabout operation is a shift in school start and end times to a common bell schedule with only one school starting in the morning peak hour, 7-8 AM. Roundabout operation and Middle School driveway operation would improve (and meet the County standard) with only one school starting within the morning peak hour.

The decision to shift school start times is a complex decision involving input from various District operations. The traffic operations expected with the HS/MS Replacement project is only one factor for the District leadership to consider when making the decision.
